

Catalog # 786

Synonyms MSMB, PSP-94, Prostate secretory protein 94, MSP,

microseminoprotein-beta, beta-inhibitin, PIP, ILM

Type Recombinant

Source E. coli Species Human Tag GST, GFP Form Liquid

Purity >95% by SDS PAGE

Shipping Ice pack

#### Introduction

MSMB is one of the three major proteins secreted by the epithelial cells of the prostate[3] and has a concentration in seminal plasma of 0.5 to 1 mg/mL

# **Description**

Beta-microseminoprotein is a member of the immunoglobulin binding factor family. This protein has been reported to have inhibin-like properties, though this finding has been disputed. It may have a role as an autocrine paracrine factor in uterine, breast and other female reproductive tissues. The protein inhibits growth of cancer cells in an experimental model of prostate cancer.

# **Application**

Immunofluorescence, FACS, ELISA, Western blot, protein-protein interactions, Pull-down assay,

#### **Purification method**

Affinity chromatography.

### **Formulation**

PBS solution 1 mg/ml, contains 10 mM glutation.

# **Storage**

-80C

Analyte specific reagent (ASR) manufactured under ISO 13485. Country of origin: Czech Republic
